

Instructions on how to run the program (YSQL part)

1. `cd` to the **Yugabyted** folder.
2. Run `/home/stuproj/cs4224l/go/bin/go build main.go` to build the project
 - If you encounter the problem `go: updates to go.mod`, run
`/home/stuproj/cs4224l/go/bin/go mod tidy`
and then re-run step 2
3. Run `/home/stuproj/cs4224l/go/bin/go run main.go -cf <host> <port> <user> <password> <dbname>` to set the database configuration
4. Run `/home/stuproj/cs4224l/go/bin/go run main.go -ld` to load all data into database
5. Run `/home/stuproj/cs4224l/go/bin/go run main.go -xs <fileNumber1> <fileNumber2> <fileNumber3> <fileNumber4>` to run all transactions in the text files
